Comprehensive R&D Launchpad Bundle

Unlock funding & systematic success

The Challenge

To access the New to R&D Grant (up to $400k), you must demonstrate capability development in at least two different areas. Doing this with multiple providers can be fragmented, making it harder to coordinate your application.

How This Program Helps You

We provide a dual-category bundle that satisfies both Regulatory & Compliance AND Lean R&D / Process Improvement requirements in one streamlined program.

What's Included

Module A: Regulatory Strategy

- Full product categorisation and global regulatory mapping.
- Identification of mandatory testing requirements for R&D validation.

Module B: Lean R&D Systems

- **Systematic Process Setup:** We build the "Lean" framework you need to resolve technical uncertainties (problem solving and root cause analysis methods).
- **Testing Protocol Design:** Setting up the "Sprints" and feedback loops for your upcoming internal and lab testing phases (verification planning, test reporting and control plans).
- **RDTI Readiness & Documentation:** Training on how to record test results and maintain R&D documentation to meet the strict "Core vs. Supporting" cost structures required for the R&D Tax Incentive.

Grant Eligibility

This bundle satisfies the full minimum capability requirement for the New to R&D Grant. By completing this program, you unlock the ability to claim 40% back on your lab fees, prototype materials, and staff wages.

Your On-Ramp to Ongoing Support

The New to R&D Grant is a stepping stone. By establishing systematic Lean R&D processes now, your business will be prepared to transition to the R&D Tax Incentive (RDTI) for permanent 15% government support once this grant concludes.

Investment

Starting from **NZD 7,450 + GST** *(This program is designed to meet MBIE New to R&D Grant criteria. If approved by MBIE prior to commencement, you can claim a 40% rebate, bringing your net investment to NZD 4,470 + GST*)*
